Emergency Contact:	Robert Thornton (Spouse)	Cell Phone:	(512) 443-8874
Known Allergies:	Penicillin (rash), Sulfa drugs (GI upset)	Email:	m.thornton@email.com
Insurance Carrier:	UnitedHealthcare Community Plan	Policy / Member ID:	UHC-847291034
Plan Type:	PPO — Gold Tier	Group Number:	GRP-55821-TX
Policy Holder:	Margaret A. Thornton (Self)	Effective Date:	01/01/2024
Secondary Insurance:	None	Co-pay:	\$30 specialist

TREATING PHYSICIAN & PRACTICE

Attending Physician:	Dr. Sandra K. Patel, MD	Physician NPI:	1437829056
Specialty / Board Cert:	Rheumatology (ABIM Board Certified)	DEA Number:	BP4421987
Practice Phone:	(512) 874-2200	Practice Fax:	(512) 874-2299
Practice Address:	4821 Crescent Park Blvd, Suite 310, Austin, TX 78701	fax ID:	74-2981034

ACTIVE DIAGNOSES & PROBLEM LIST

Diagnosis Code	Description	Onset Date	Status
M05.79	Rheumatoid arthritis with rheumatoid factor — multiple joints	03/2021	Active
M79.3	Panniculitis (associated)	06/2022	Active
Z87.39	Personal history of other musculoskeletal disorders	—	Historical
E11.9	Type 2 diabetes mellitus without complications	2018	Active — monitored
I10	Essential (primary) hypertension	2019	Controlled

CURRENT MEDICATIONS & PRESCRIPTION HISTORY

Drug Name & Form	Dose / Sig	Route	Prescribing MD	Start Date	Rx Status
Methotrexate 2.5mg tablet	15mg weekly (6 tabs)	Oral	Dr. S. Patel	04/10/2021	Active
Folic Acid 1mg tablet	1mg daily	Oral	Dr. S. Patel	04/10/2021	Active

Hydroxychloroquine 200mg	200mg twice daily	Oral	Dr. S. Patel	06/15/2021	Discontinued — inadequate response (10/2022)
Etanercept 50mg/mL inj.	50mg weekly subcut.	SubQ	Dr. S. Patel	11/01/2022	Discontinued — injection site reactions (03/2023)
Adalimumab (Humira) 40mg	40mg every 2 weeks	SubQ	Dr. S. Patel	04/01/2023	Discontinued — loss of efficacy (08/2024)
Metformin 500mg tablet	500mg twice daily	Oral	Dr. R. Nguyen	2018	Active
Lisinopril 10mg tablet	10mg once daily	Oral	Dr. R. Nguyen	2019	Active

NEW MEDICATION REQUEST — PENDING AUTHORIZATION

Requested Drug:	Tofacitinib (Xeljanz) 5mg tablet	NDC:	00069-0100-30
Prescribed Dose:	5mg orally twice daily	Qty / Days Supply:	60 tablets / 30 days
Administration:	Self-administered — oral	Therapy Type:	New prescription
Clinical Indication:	Moderate-to-severe active RA — inadequate response to 2 biologic DMARDs		

CLINICAL NOTES — MOST RECENT VISIT

Visit Date: November 8, 2024 | Visit Type: Established Patient — Rheumatology Follow-up | Provider: Dr. Sandra K. Patel, MD

Chief Complaint: Patient presents for follow-up of rheumatoid arthritis. Reports worsening joint pain and swelling in bilateral hands, wrists, and knees over the past 8 weeks despite current Methotrexate therapy. Rates pain at 7/10. Notes significant morning stiffness lasting >2 hours daily. **History of Present Illness:** Ms. Thornton was diagnosed with seropositive RA in March 2021. She was initiated on Methotrexate (MTX) 15mg weekly with folic acid supplementation, which provided partial but inadequate response. Hydroxychloroquine was added in June 2021 and discontinued October 2022 due to inadequate response. Etanercept (Enbrel) was trialed November 2022 through March 2023 and discontinued due to persistent injection site reactions and lack of meaningful clinical improvement. Adalimumab (Humira) was then initiated April 2023 and provided initial improvement, however the patient experienced loss of efficacy by August 2024 with return of active synovitis. **Contraindications / Intolerances on Record:** Penicillin (documented rash — anaphylactoid), Sulfa drugs (GI intolerance). No known contraindication to JAK inhibitors at this time. Hepatitis B/C and TB screening performed and negative (09/2024). **Objective:** Swollen joint count: 8. Tender joint count: 11. CRP elevated at 3.2 mg/dL (ref <0.5). ESR 68 mm/hr. DAS28-CRP score: 5.4 (high disease activity). Hand X-rays: marginal erosions noted at 2nd and 3rd MCP joints bilaterally — progressive from 2023 imaging. **Assessment & Plan:** Patient has failed two biologic DMARDs (etanercept, adalimumab) and conventional DMARD therapy (MTX, hydroxychloroquine). Given active high disease activity and documented failure of preferred alternatives, initiating Tofacitinib (Xeljanz) 5mg BID is clinically appropriate per ACR guidelines. Will continue Methotrexate 15mg weekly as background therapy. PA request to be submitted to UnitedHealthcare. Patient counseled on risks including infection, lab monitoring requirements. Follow-up in 8 weeks.

RECENT LABORATORY RESULTS

Test	Result	Reference Range	Date	Flag
CRP (C-Reactive Protein)	3.2 mg/dL	< 0.5 mg/dL	11/08/2024	HIGH
ESR (Erythrocyte Sed. Rate)	68 mm/hr	< 20 mm/hr	11/08/2024	HIGH
RF (Rheumatoid Factor)	142 IU/mL	< 14 IU/mL	11/08/2024	HIGH
Anti-CCP Antibodies	Positive (>250 U/mL)	< 20 U/mL	11/08/2024	HIGH
CBC — WBC	6.8 K/uL	4.5–11.0 K/uL	11/08/2024	Normal
CBC — Hemoglobin	11.4 g/dL	12.0–16.0 g/dL	11/08/2024	LOW
Hepatic Panel — ALT	22 U/L	7–40 U/L	11/08/2024	Normal
Creatinine	0.84 mg/dL	0.6–1.1 mg/dL	11/08/2024	Normal
HbA1c	7.1%	< 5.7% (normal)	09/15/2024	HIGH
TB Quantiferon Gold	Negative	Negative	09/15/2024	Normal

Hepatitis B Surface Ag	Non-reactive	Non-reactive	09/15/2024	Normal

VISIT HISTORY (LAST 12 MONTHS)

Date	Visit Type	Provider	Summary
11/08/2024	Rheumatology Follow-up	Dr. S. Patel	Disease flare, Humira loss of efficacy, Xeljanz PA initiated
08/20/2024	Rheumatology Follow-up	Dr. S. Patel	Adalimumab efficacy declining, DAS28 rising, labs ordered
05/14/2024	Rheumatology Follow-up	Dr. S. Patel	Stable on Humira, moderate disease activity, MTX continued
02/06/2024	Rheumatology Follow-up	Dr. S. Patel	Partial response to Humira, dose maintained
10/18/2023	Primary Care	Dr. R. Nguyen	Annual physical, diabetes/HTN management, labs reviewed
07/11/2023	Rheumatology Follow-up	Dr. S. Patel	Etanercept DC confirmed, Humira PA approved and initiated
